

BISCOTTI

THE BISCOTTI COOKIES STRAIN IS ONE OF THE BEST

Cookies Fam have their fingerprints on many of the best strains on the shelves today. You may not even realize how many different strains come from Cookies Fam genetics and their flagship GSC strain (F1 strain crossed Durban Poison and OG Kush). The Biscotti strain is a Cookies classic crossed a southern OG strain: Gelato #25 and South Florida OG, aka Triangle Kush.

The Cookies Family genetics have been getting a lot of attention in the cannabis industry as of late for their big collaborations and national expansions into states like Washington. Cookies Family genetics are known to be potent indica-hybrids that have sweet aromatics.

Gelato is a Thin Mints phenotype of GSC crossed with Sunset Sherbet, per Leafly. The #25 indicates the phenotype that was chosen for that crop. These strains provide Biscotti with its deep purple color and sweet taste. The other half of Biscotti's excellence comes from South Florida OG. Also known as Triangle Kush, this strain hails from the warm humid climates of the deep south. It is known as a creativity stimulating indica.

If you find the Biscotti strain, expect a dark green flower with bold purple highlights, long orange hairs and a fluffy grow structure. It's sweet and buttery aromatics pack a mellow, mood elevating high. Biscotti might be one of the best strains to pair with a cup of coffee because of the sweet taste. Indica effects perfectly match the bitter taste and caffeine boost that comes with a black coffee.
